**DETAILED ACTION**

***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9 and 16, drawn to a method of preparing a protein array.
- II. Claims 10-12 and 17-19, drawn to a method of preparing a protein array wherein at least one array element includes an oligonucleotide such as mRNA or DNA.
- III. Claims 13 and 20, drawn to a method of preparing a protein array wherein one of the array element includes a sugar.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are drawn to different methods using structurally different components and steps that results in different array of compounds with different effects and/or functions.

Art Unit: 1639

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, and the search required for Group I is not required for Groups II-III, specifically the literature searches, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
